ACE CSE TRAINING THE TEACHERS

Cyber Security for Young Adults

These were the basic themes we covered in session 1

They set the build blocks for students interests and their pathways into cyber security

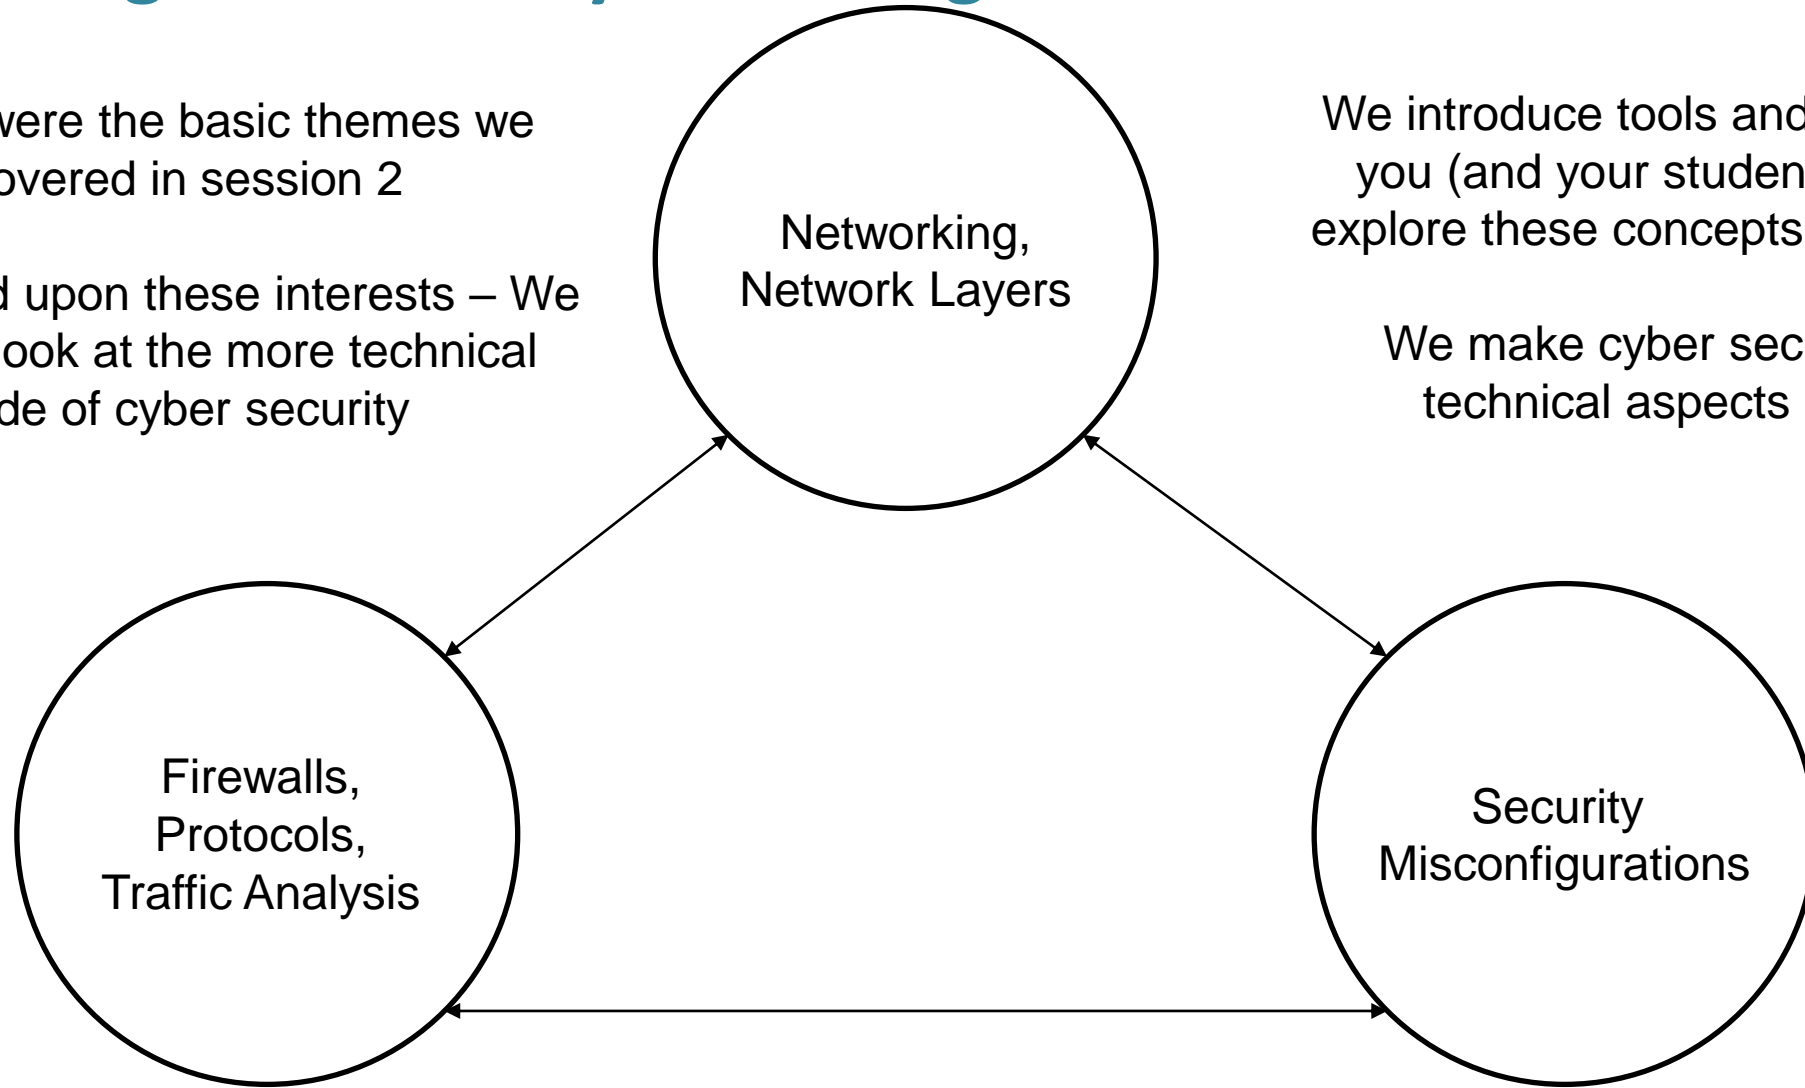

They also (hopefully) raise awareness of cyber security

It's already something they're doing, even at a basic level

Networking and Security Misconfigurations

These were the basic themes we covered in session 2

They build upon these interests – We start to look at the more technical side of cyber security

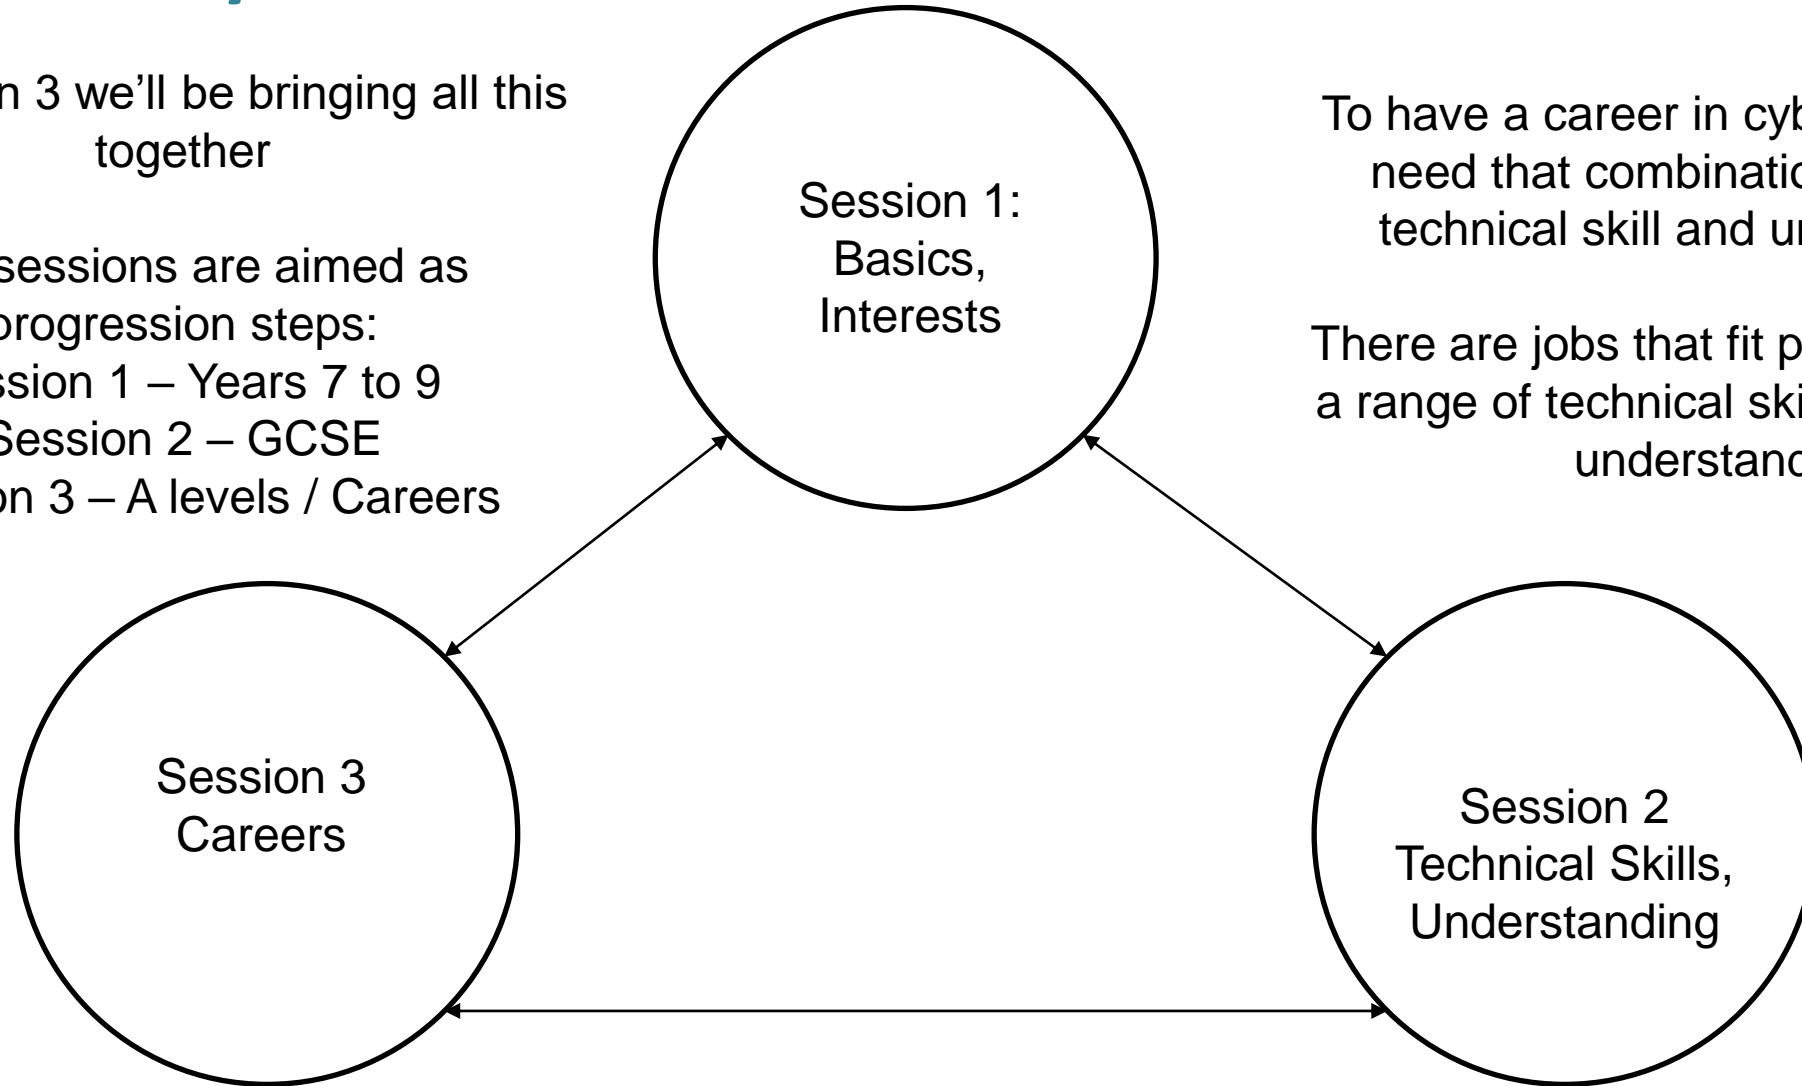

We introduce tools and resources that you (and your students) can use to explore these concepts and learn more

We make cyber security and the technical aspects accessible

Cyber Security Careers

In Session 3 we'll be bringing all this together

The sessions are aimed as progression steps:
Session 1 – Years 7 to 9
Session 2 – GCSE
Session 3 – A levels / Careers

To have a career in cyber security you need that combination of interest, technical skill and understanding

There are jobs that fit people who have a range of technical skills and levels of understanding

Q&A
